

Want 80% utilised space in a 40ft container?

INTRODUCING OUR NEW RANGE OF AMAZON CASE SIZES WITH INTERSTACK TO FORM STABLE SOLID PALLET PACKAGING

Two years in development, the CP Amazon 4080 project started with a mission critical application from a German prime defence contractor, with the additional challenge to utilise 80% of a 40ft shipping container. It led to the design and manufacture of a 'grouping' of cases that securely nest together: one large (AC880 5254) case, plus 2 small (AC8033 4608) cases, sit aside each other – matching the precise footprint of the EUR / EUR1 pallet size. Together, with the euro pallet, their combined height is 2.27m - designed to precisely maximise the space in a 20ft or 40ft ISO shipping container.

Each case features the newly-designed male/female nesting system and when sat aside each other in this 1+2 : 2+1 combination, the cases form a 'locking' stack, preventing lateral movement and, when palletised, remain secure and solid, allowing for a quick, easy load-in, optimisation of container space and easy fork-lifting to high-rack warehousing or deployment at the destination.

BUILT IN THE UK - TO EXACTING STANDARDS

Our interlocking cases are built with virgin-grade LLDPE (linear low-density polyethylene), which absorbs impact, is UV stabilised, easy to clean and doesn't corrode. Designed and rotationally moulded in our West London manufacturing facility, our process delivers 15-20% more material to edges and corners, providing greater strength in usually fragile places. Cases are MIL-STD-810G and IP65 accredited: tested against hot and cold climates, driving rain and sand, fungus, salt fog, ultraviolet, direct sunlight, high humidity, drop and vibration and loose cargo load.

MAXIMISED UTILISATION OF SHIPPING SPACE

Amazon Containers 4080 system meets the high-efficiency requirement for **full container load shipping (FCL)** – maximising weight and volume of both shipping containers and container ships. As shipping companies increasingly seek ways to improve door-to-door efficiency, they require collaboration at every point of the supply chain. Stricter shipping standards are becoming commonplace and effective containerisation solutions such as the Amazon 4080 system obviate the need for multiple transportation and labour - shortening lead times, improving productivity and reducing costs.

Amazon 4080 system safe-stacking and easy-load benefits also allay concerns about groupage, if your total shipment is **less than a container load (LCL)**. Should your shipment be required to sit alongside another company's consignment inside the container, the palletted CP Amazon 40-80 nesting system ensures your consignment stays safe, upright - and together.

NEW AMAZON SIZES

OUR CASES FIT THE EXACT FOOTPRINT OF A EURO PALLET
